

Delta Controls has been a long time user of EDWin.

In 1994 we started with three EDWin16 seats. Over the years we have followed through to Edwin 32, and finally EDWinXP. We have increased our seats from 3 to 9. We have been using EDWinXP for the past year and have created 10 new designs.

EDWinXP Cad package is easy to work with. The GUI interface is easy to follow and allows moving around the package a snap.

We have always received great support, and quick response to any technical questions or issues we may have. EDWin products are reliable, and work well for our design needs. The EDWinXP CAD package is an effective tool for the value. We use EDWinXP as the previous packages from EDWin have been reliable.

CAD files from older versions such as EDWin16, and EDWin32 can be easily converted and loaded into EDWinXP. This allows us to update older designs. We have always received great support. When receiving great support and a reliable product it made sense for Delta Controls to upgrade to EDWinXP.
